RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. Original publisher: Tucson, Ariz. : Lunar and Planetary Laboratory ; Moffett Field, Calif. : NASA Ames Research Center, 1990 OCLC Number: (OCoLC)68613353 Excerpt: . . . Taking values of $R = 0.1 \text{ cm}$ (Figure 9), $T_s = 5 \text{ seconds}$, $\cos \alpha = 0.2$, then $a = 5 \cdot 10^{-1}$ to $5 \cdot 10^{-11} \text{ gm cm}^2$ Since the normal opacity of the E Ring can be independently constrained from ground-based and Voyager imaging, it is also possible to estimate corresponding limits on the mean ring particle thickness. Although the maximum optical thickness has been estimated as greater than 10^{-6} near the orbit of Enceladus, a more appropriate mean value for the 4-5 R_s region is $5 \cdot 10^{-7}$ S. Larson and M. Showalter, private communications . Thus, $i = a \left(\frac{p}{r} \right)$, ~ 1 to 10 pm The corresponding constraint on the size distribution of Ring E particulates is given by the relation e. g. Van Alien, 1983 , $7 \cdot (4/3) \left(\frac{r}{r_0} \right)$ where r is the radius of a single particulate (assumed spherical) and the angle brackets denote the mean over the distribution. Phase Space Density Models In principle, radial phase space density profiles of low-energy electrons in the inner Saturnian magnetosphere would allow rigorous modeling to infer absorption lifetimes within a lossy region for a given form of the diffusion coefficient D . Unfortunately, profiles at sufficiently low energies with adequate resolution to show a reduction in accord with the flux minima evident in Figure 12 do not appear to be available. Phase space density profiles for energetic electrons in Saturn's inner magnetosphere have been published by Van Allen et al. 1980 and Armstrong et al. 1983 . The Van Allen...
