

## Chaetanthera and Oriastrum

By Alison Davies

Südwestdeutscher Verlag Für Hochschulschriften AG Co. KG Nov 2015, 2015. Taschenbuch. Book Condition: Neu. 220x150x19 mm. This item is printed on demand - Print on Demand Neuware - The Mutisieae (Asteraceae) are a diverse basal lineage. A polymorphous paraphyletic group of about 50 South American species within the Mutisieae are characterized by having foliaceous outer involucre bracts and winged inner bracts. This publication presents the results of the systematic and taxonomic study of these taxa. The research focuses on newly assessed morphological and anatomical variation of characters taken from habit, involucre bracts, and achenes, combined with palynological and genetic (nr DNA) information. The genus *Chaetanthera* (30 species) is extensively revised and the genus *Oriastrum* (18 species) is reinstated. Character variation is considered in the light of form, function and habitat. Primary (cold) and secondary (aridity) adaptations to environmental conditions and trends towards insular syndromes are discussed. The biogeography of the species is explored. Three case studies of species complexes within *Chaetanthera* demonstrate the occurrence of polymorphism as evidence of active speciation and hybridisation events. Species keys and detailed descriptions are provided. 312 pp. Englisch.
